

Functional Fillers for Resins, Paints and Films

TODA KOGYO Group develops and provides various functional fillers for resins, paints, and films by the cutting-edge technology of fine particle manufacturing.

UV shielding function

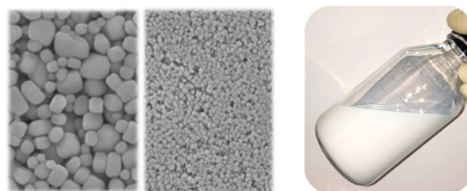

Transparent iron oxide

(For high transparency and high saturation)

High refractive index and high dielectric function

Barium titanate

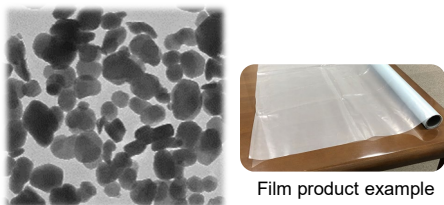

(For dielectric layer or filler in electrode layer)

Dispersion product

Anion capture function

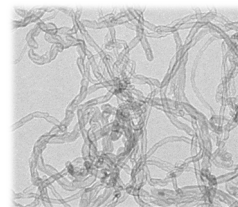

Layered double hydroxide (hydrotalcite)

Film product example

Conductive and electromagnetic wave absorption/shielding function

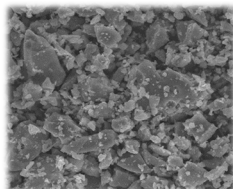

Carbon nanotube

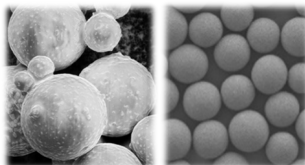

Under development

Noise suppression function

Soft ferrite for resin composite
[FEROTOP™]

Spherical soft ferrite granular particle

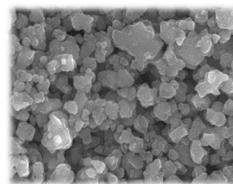

Under development

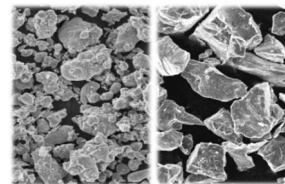

(Particle size and distribution can be controlled.)

Inductor function

Soft ferrite
[FRX series]

Soft magnetic metal

(Fe-Si-Cr, Fe-Si-Al)
